## **IN THE CLAIMS**

Kindly amend the claims, without prejudice, without admission, without surrender of subject matter, and without any intention of creating any estoppel as to equivalents, as follows:

<u>Listing of claims</u>:

1. (Currently Amended) A single facer corrugator belt in combination with a corrugated paper board machine, said belt comprising:

a base structure, said base structure having an inside and an outside surface that contacts paper board and a machine or running direction and a cross machine direction, said base structure being formed by machine direction yarns and cross machine direction yarns;

a <u>liquid</u> polymeric resin coating applied <u>and cured</u> on said outside surface of said base structure, wherein said polymeric resin coating forms a distinct layer on said outside surface of <u>said base structure</u>; and

a plurality of grooves formed in said polymeric resin coating;

wherein said plurality of grooves aid in improved paper board release and increased rate of board moisture removal.

- 2. (Previously Presented) The combination of claim 1, wherein said grooves are continuous.
- 3. (Previously Presented) The combination of claim 1, wherein said grooves are discontinuous.
- 4. (Previously Presented) The combination of claim 1 further comprising at least one layer of fibers needled into said base structure and extending at least partially there through.

- 5. (Previously Presented) The combination of claim 4, wherein the needled fibers are impregnated with polymeric resin.
- 6. (Previously Presented) The combination of claim 1 wherein said grooves extend partially through said polymeric resin coating, said polymeric resin coating forming an impermeable layer on said outside surface.
- 7. (Withdrawn) The single facer corrugator belt of claim 1, wherein said grooves extend through said polymeric resin layer forming a permeable layer on said at least one surface.
- 8. (Previously Presented) The combination of claim 1, wherein the base structure is woven, non-woven, knitted, mesh, braided, spiral-linked or spiral wound.
- 9. (Withdrawn) A single facer corrugator belt comprising: a base structure, said base structure having an inside and an outside surface and a machine or running direction and a cross machine direction, said base structure being formed by machine direction yarns and cross machine direction yarns; a polymeric resin layer formed on said base structure; and a plurality of holes formed in at least one surface of said base structure.
- 10. (Withdrawn) The single facer corrugator belt of claim 9 further comprising at least one layer of fibers needled into said base structure and extending at least partially there through.

- 11. (Withdrawn) The single facer corrugator belt of claim 10, wherein the needled fibers are impregnated with polymeric resin.
- 12. (Withdrawn) The single facer corrugator belt of claim 9 wherein said holes extend partially through said polymeric resin layer, said polymeric resin layer forming an impermeable layer on said at least one surface.
- 13. (Withdrawn) The single facer corrugator belt of claim 9, wherein said holes extend through said polymeric resin layer forming a permeable layer on said at least one surface.
- 14. (Withdrawn) The single facer corrugator belt of claim 9, wherein the holes extend completely through said belt.
- 15. (Withdrawn) The single facer corrugator belt of claim 9, wherein the base structure is woven, non-woven, knitted, mesh, braided, spiral-linked or spiral wound.
- 16. (Original) The combination of claim 1 wherein said grooves are arranged in rows wherein a line intersecting the ends of each groove in a row is substantially perpendicular to the machine or cross-machine direction.
- 17. (Original) The combination of claim 1 wherein said grooves are arranged in rows wherein a line intersecting the ends of each groove in a row is at an angle to the machine or cross machine direction.

- 18. (Original) The combination of claim 17 wherein the angle is between 25 and 30 degrees.
- 19. (Original) The combination of claim 1 wherein grooves are formed in staggered rows.
- 20. (Original) The combination of claim 1 wherein said grooves comprise a plurality of noncontinuous and continuous grooves.
- 21. (Previously Presented) The combination of claim 1 wherein said grooves comprise a first straight portion followed by a zigzag portion, followed by a second straight portion.
- 22. (Original) The combination of claim 1 wherein said grooves comprise a number of first portions having a first width and a number of second portions having a second width that is smaller than the first width.
- 23. (Original) The combination of claim 1 wherein said grooves are shaped having an opening which is smaller than a remaining portion of the groove.
